

## **Plans of Operation:**

- 1) When the snow starts falling, sander trucks are dispatched to apply de-icing materials such as road salt and sand to keep the roadways safe.
- 2) When 2-3 inches has accumulated on the streets a snow plowing operation usually begins.
- 3) Once the snow stops falling and the roads have been plowed the streets will again be treated with de-icing materials to prevent a refreezing of the road surface.
- 4) Department personnel will then clear intersections and plow Municipal owned parking lots. The Highway Department is not responsible for the clearing of snow on the walkways at Municipal buildings.
